Year 7 ICT Homework 6 - Key Words & Definitions

Task 1

Below are some key words and definitions that will be used in the current unit we are studying in lessons. To help you remember the word and definition, you are to write each one out twice in the table provided

Word	Definition
Computer	A computer is a device that is able to take in data - called an input . It then acts upon that data - called processing , the result of which is the output of the machine.
Computer	
Computer	
Input device	An input device is any piece of hardware which is used to enter data or content into a computer system. Examples are keyboard , mouse and a scanner
Input device	
Input device	
Output Device	In computing terms, an output device is a piece of hardware that obeys a computer command to get information from that computer. Example include printers , screens , speakers
Output Device	

Output Device	
Storage	This is the method a computer uses for keeping data that has to be kept for some time. Examples include CD`s , USB Drives, Cloud Storage.
Storage	

Memory Challenge Tasks

Now after writing out these definitions see if you can answer the following questions from memory (You could ask someone in your family to check your answers)

Note - you do not have to write the answers out just see if you can state verbally what they are

- 1) What is a computer?
- 2) What is an input device?
- 3) What is an output device?

Challenge memory questions

1. What is a phishing scam?
2. List 5 ways to spot a phishing scam
3. List 4 steps you can take to deal with a phishing scam
4. What does RSI stand for?
5. List 3 "health issues" that the use of computers might cause
